

UAT Test Plan

Meridian Group Data Platform Consolidation

The goal here is to confirm that the migrated data, the vendor validation gate, and the reconciliation and KPI pipeline all produce results the entity finance leads actually trust, before any of it goes live.

Test cases

ID	Scenario	Steps	Expected result
UAT-01	Vendor de-duplication	Pick a vendor known to exist in all three legacy sheets and look it up in the crosswalk.	All three legacy rows map to the same canonical vendor ID.
UAT-02	Date parsing	Compare a sample invoice date in the legacy file against the migrated record.	Dates match once the format difference is accounted for.
UAT-03	Currency parsing	Compare a Meridian West invoice amount (the "\$12,508.72" style) before and after migration.	Amount matches as a clean numeric value.
UAT-04	Duplicate detection	Review invoices flagged as duplicates.	Each flagged pair shares the same entity, vendor, amount, and date.
UAT-05	Vendor validation gate	Run validation against a vendor with no tax ID on file.	Vendor is flagged and does not silently pass.
UAT-06	Reconciliation exceptions	Run the unmatched-invoices query.	Every paid invoice with no bank transaction appears exactly once.
UAT-07	KPI accuracy	Spot-check five matched invoice/bank pairs against the dashboard's cycle-time figure.	Figures agree within rounding.
UAT-08	Dashboard rendering	Open the dashboard in light and dark mode.	KPI tiles and charts render, tooltips and the table-view toggle both work.

Sign-off

Entity	Lead	Status
Meridian North	(entity finance lead)	Pending
Meridian West	(entity finance lead)	Pending

Entity	Lead	Status
Meridian Coastal	(entity finance lead)	Pending

Go-live only happens once all eight cases pass and all three entities have signed off.
